

## **TITLE of the INVENTION**

---

"Method and device for rearranging an electronic document"

## **TEXT of the ABSTRACT**

---

The method of printing an electronic document comprises a step (E1) of constructing groups of recordings of graphical instructions forming an information block of the document, a step (E6, E30-E33) of dividing these groups into a minimum number of sub-groups adapted to be printed respectively on single sheets after enlargement; and a step (E9, E36) of printing the document after enlargement from the main print file (EMF) and related print files.

Use notably for printing a poster.
